List of determined species of planktonic foraminifera from the localities Racani (RAC); Gabrijelići (GAB), Jakomići I (J) and Jakomići II (JAK) with their relative abundances in samples expressed by different shades of grey: the dark grey = common (>25 %), medium grey = few (6-24 %), and light grey = rare (<5 %) (for Gabrijelići section the abundance of planktonic species was estimated - defining the categories N = numerous and P = present). Age attribution of the listed species is according to the Atlas of Eocene Planktonic foraminifera (edited by Pearson et al., 2006) and updated information available from <https://www.microtax.org/pforams>. For additional data from Jakomići section see also: Mužek, K., 2022, Eocene planktonic foraminifera from Jakomići locality, Pazin basin. Diploma Thesis, 71 p., Faculty of Science, Zagreb (supervised by Đ. Pezelj). [urn:nbn:hr:217:806806](https://nbn-resolving.org/urn:nbn:hr:217:806806)
